Attorney Docket: AMKOR-048RCE

Amendments to the Claims:

1. (Currently Amended) A semiconductor package, comprising:

a semiconductor chip having an upper surface provided with a plurality of input/output pads thereon;

a chip paddle adjacent a bottom surface of the semiconductor chip, said the chip paddle having an upper surface and a lower surface;

a plurality of leads surrounding the chip paddle and having upper and lower surfaces, wherein the chip paddle has a maximum thickness which exceeds a maximum thickness of each of the leads and the upper surfaces of the leads reside on a common plane which extends between the upper and lower surfaces of the chip paddle;

conductive wires for electrically connecting the input/output pads of the semiconductor chip to the leads; and

a package body comprised of an encapsulation material that encapsulates the semiconductor chip, the conductive wires, the chip paddle and the leads, wherein <u>at least</u> portions of the <u>lower surfaces of the</u> chip paddle and the leads are externally exposed at a bottom surface of the chip paddle and the leads in <u>a</u> <u>common exterior surface of</u> the package body.

- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Previously Presented) The semiconductor package as set forth in claim 1, wherein:

the lower surface of the chip paddle and the lower surface of each of the leads are in a common plane.

5. (Previously Presented) The semiconductor package as set forth in claim 1, wherein:

the chip paddle is bonded to a bottom surface of the semiconductor chip with an adhesive.

Attorney Docket: AMKOR-048RCE

6. (Previously Presented) The semiconductor package as set forth in claim 1, wherein:

each of the leads has an etched part at an end facing the chip paddle.

- 7. (Cancelled)
- 8. (Cancelled)
- 9. (Cancelled)
- 10. (Cancelled)
- 11. (Cancelled)
- 12. (Cancelled)
- 13. (Currently Amended) A packaged semiconductor, comprising:

a chip paddle adapted to receive a semiconductor chip, said chip paddle having an upper surface, a lower surface, and an intermediate surface positioned between and parallel to the upper surface and the lower surface, the lower and intermediate surfaces collectively defining a lower side area of the chip paddle, the intermediate surface being about 10% to about 90% of the lower side area;

a plurality of leads surrounding the chip paddle, the chip paddle and the leads comprising a leadframe wherein the intermediate surface of the chip paddle and at least one portion of an upper surface of each of the leads are in approximately a common plane, and wherein the chip paddle has a maximum thickness which exceeds a maximum thickness of each of the leads; and

the leadframe being adapted to receive a package body comprised of encapsulation material for encapsulating the chip paddle and the leads, wherein portions of the chip paddle and the leads are externally exposed in the package body and the intermediate surface of the chip paddle is located inside the package body.

- 14. (Cancelled)
- 15. (Cancelled)
- 16. (Cancelled)

Attorney Docket: AMKOR-048RCE

17. (Previously Presented) The packaged semiconductor as set forth in claim 13, wherein:

each of the leads has an etched part at an end facing the chip paddle.

18. (Previously Presented) The packaged semiconductor as set forth in claim 13, wherein:

each of the leads has a lower surface which is externally exposed in the package body.

19. (Currently Amended) A package for mounting a semiconductor chip, comprising:

a leadframe, comprising:

a chip paddle <u>defining a lower side area and an etched portion in</u>
the lower side area, wherein the etched portion is about 10% to about 90% of
the lower side area and a surface of the chip paddle is externally exposed in the
package; and

a plurality of leads surrounding the chip paddle, wherein a surface of each of the plurality of leads is externally exposed in the package;

means for receiving encapsulating material for encapsulating the leadframe;

means for locking the encapsulating means to the chip paddle;

means for providing a fluid path for the encapsulating means during encapsulation of the leadframe; and

said means for locking and said means for providing a fluid path being formed from a void caused by said chip paddle being of a maximum thickness which exceeds a maximum thickness of each of the leads.

- 20. (Cancelled)
- 21. (Cancelled)
- 22. (Currently Amended) The package as set forth in claim 21 19, wherein the means for locking comprises the etched portion.
- 23. (Currently Amended) The package as set forth in claim 24 19, wherein the means for providing a fluid path comprises the etched portion.

Attorney Docket: AMKOR-048RCE

24. (Cancelled)

25. (Currently Amended) The package as set forth in claim 21 19, wherein the etched portion is located inside the package body, a lower surface of the chip paddle and a lower surface of each of the plurality of leads are in approximately a common plane, the chip paddle is bonded to a bottom surface of a semiconductor chip and at least one of the plurality of leads has an etched part at an end facing the chip paddle.
